

WHAT IS IT? (RATIONALE)

Being able to correctly answer questions is important for all people. You must be able to identify true and false statements.

ADAPTATIONS

Have the students decide as a group what the answer is instead of individually.

GETTING STARTED (PROCEDURES & MATERIALS)

Students will stand across the room from the teacher. Students will then be given a statement. They will decide if they think it is true or false. If they get it right, they take a step towards the teacher. If they get it wrong, they take a step away from the teacher. If 75% of the students get to the teacher within “X” number of questions, they should get some sort of prize (a few extra minutes at the end of the day for another game possibly).

No equipment necessary.
